

**AMENDMENTS TO THE CLAIMS**

1. (currently amended) Process for carrying out non-adiabatic reactions comprising the steps of:

introducing in parallel a first stream of steam reform reactants into a first reaction space and a second stream of steam reform reactants into a second reaction space;

at reaction conditions contacting the first reactant stream with a catalyst in the first reaction space in indirect heat exchange with a heat exchanging medium and contacting the second reactant stream with a catalyst in the second reaction space in indirect heat exchange with a heat exchanging medium; and

withdrawing a first steam reformed product gas and a second steam reformed product gas, respectively, from the first and second reaction spaces; and,

the catalyst in the first reaction space being arranged within a tubular reactor in indirect heat exchanging relationship with the heat exchanging medium by introducing the medium into tubular heat exchange space concentrically surrounding the tubular reactor with the first reaction space, the catalyst in the second reaction space being arranged on shell side of a heat exchange space in indirect heat exchanging relationship with the heat exchanging medium.

2. (original) Process of claim 1, wherein the non-adiabatic reaction is endothermic steam reforming of a hydrocarbon feedstock.

3. (currently amended) Process of claim 1, wherein the heat-exchanging medium comprises an effluent stream from autothermal steam reforming of a hydrocarbon feed stock and/or the first and second steam reformed product ~~gas~~ gasses.

4-6 (canceled )
